

Teacher App - QA Report

Date: 08 August 2025

1. Teacher Access Audit API should be called only once per day. Currently, it is being triggered multiple times whenever a teacher logs in, causing repeated insertions.
2. While updating the diary, if the diary details contain a paragraph with 4–5 lines, the complete text is not fully visible in the view.
3. Clicking on a diary image should display it in full screen. If a download option is not required, it should also be removed.
4. In the View Diary section, clicking the View Diary button opens a YouTube link, but the caption is not relevant.
5. When uploading a diary for a previous day, the list view still shows the current date as the selected date.
6. If neither a YouTube link nor an image is selected, the diary is not uploaded. It may be necessary to add an option in the API to allow such uploads.
7. After marking attendance, the page should redirect to the attendance view page.
8. On both the Mark Attendance and View Attendance pages, provide a table search option so that students can be searched by GR number or name.
9. While marking attendance, the default status should be set to Present.
10. After uploading a video lecture, the page redirects to the view page; however, when a previous day's lecture is uploaded, the current date is still highlighted.
11. After uploading a video lecture, when editing it, the date should remain unchanged. Currently, if only the details/content are updated, the date automatically changes to 1 Jan 1970 after saving.
12. In the marksheet, when Urdu subject marks are saved (e.g., 75 total marks), and then marks for another subject are entered, the Total Marks field still displays the previous value (e.g., 75). This field should be cleared by default.
13. In the PTM list view, remove "PTM Monthly" from all the headings.
